EDUCATION

Maturi Venkata Subba Rao (MVSR) Engineering College — Hyderabad, Telangana
Bachelor of Engineering (B.E./B.Tech), Information Technology — CGPA: 7.79/10.0 — *2023 – 2027*

Narayana Junior College — Hyderabad,Telangana
Intermediate Percentage -- 80.02% — *2021-2023*

Akshara International School — *Hyderabad,Telangana*
School Marks Percentage- 75% — *2019-2020*

RELEVANT COURSEWORK

Machine Learning, Data Structures & Algorithms, Object-Oriented Programming, Database Management Systems, Operating Systems, Computer Networks

EXPERIENCE

Cybersecurity Virtual Intern — AICTE EduSkills Internship Program — Apr 2026 – Jun 2026
Remote

AI-ML Virtual Intern — EduSkills Academy — Apr 2025 – Jun 2025
Remote

PROJECTS

Local Delivery Helper — Full-Stack Route Optimization Application | GitHub — **2026**

- Built a full-stack SaaS-style module from scratch in Python, covering user registration, authentication, and role-based access control.
- Designed a reusable, scalable relational database schema in MySQL, writing SQL queries for CRUD operations across order management and tracking.
- Integrated ML models to calculate optimized delivery routes and predict delivery windows from historical data.
- Built backend API endpoints to bridge the AI-powered routing logic with the user interface.

AI Agent-Based Public Grievance Resolution System — Intelligent Civic Complaint Management Platform | GitHub **2026**

- Built a full-stack AI-powered grievance management system using **FastAPI, Streamlit, Python, and SQLAlchemy** for automated complaint processing.
- Developed a **multi-agent pipeline** for grievance classification, priority assignment, SLA calculation, and automatic escalation.
- Built a **REST API and admin dashboard** with grievance tracking, analytics, audit history, explainable AI decisions, and SLA-breach monitoring.

Banking Transaction Simulator — Core Financial Logic Engine | GitHub — **2026**

- Engineered a transaction simulation engine in Python, building the balance-check and transfer features from scratch.
- Implemented reliable backend validation logic to maintain transactional integrity across simulated banking workflows.
- Designed a modular, maintainable architecture so new features could be added without reworking existing modules.

AI-Based Blood Donation Management System — Smart Healthcare & Match Platform | GitHub — **2025**

- Built an AI-driven web application (Flask, Python, Bootstrap) from scratch, connecting blood donors with recipients in real time.
- Trained and integrated a Logistic Regression ML model (Scikit-learn, Pandas, NumPy) to predict donor availability.
- Implemented compatibility-matching algorithms with geolocation filters for accurate, real-time donor matching.

TECHNICAL SKILLS

Languages: Python, Java, C++, JavaScript, SQL
AI/ML: Scikit-learn, Pandas, NumPy, Machine Learning, Deep Learning
Web Development: HTML, CSS, React.js, Node.js, REST APIs
Databases: MySQL, MongoDB, Firebase, Relational DB Design
CS Fundamentals: Object-Oriented Programming, Data Structures & Algorithms, Complexity Analysis, Operating Systems, Computer Networks, Software Engineering
Cloud & Tools: Docker, Kubernetes, AWS, Git, GitHub, VS Code

ACHIEVEMENTS & CERTIFICATIONS

- Participated in IEEE Student Program
- AWS AI-ML Virtual Internship Certificate (AWS)
- Palo Alto Cybersecurity Virtual Internship Certificate (Palo Alto)
